Art Unit 1711

This application contains claims directed to the following patentably distinct species of the claimed invention: Applicants are required to elect a single oxygen barrier polymer from one of the specific oxygen barrier polymers recited in claim 1; applicants are also required to elect a specific oxygen scavenging polymer from either polyamide oligomers or polymers derived at least in part from xylylene diamine based monomers; applicants are also required to elect a single photoinitiator from one of the specific photoinitiators in either claims 10 or 11; applicants are also required to elect a single transition metal from claim 19; applicants are also required to elect a single antioxidant from one of those in claim 20; applicants are also required to elect a single packaging article by selecting either single layer flexible articles or multilayer flexible articles or single layer rigid articles or multilayer rigid articles; applicants are also required to elect articles either requiring structural layers or those not requiring structural layers; if applicants elect articles requiring structural layers, then applicants should elect a single material for use in producing the structural layer from one of those in claim 30; applicant is required under 35 U.S.C. § 121 to elect articles requiring a scavenging layer or not requiring a scavenging layer; if applicants elect articles requiring a scavenging layer, then applicants should elect a single scavenging polymer by electing

Art Unit 1711

one of the specific scavenging polymers from those in claims 32 or 33; applicants should also elect a single type of article form one of those in claim 49.

Applicants are required under 35 U.S.C. § 121 to elect a single disclosed species for prosecution on the merits to which the claims shall be restricted if no generic claim is finally held to be allowable. Currently, no claims are generic.

Applicants are advised that a reply to this requirement must include an identification of the species that is elected consonant with this requirement, and a listing of all claims readable thereon, including any claims subsequently added. An argument that a claim is allowable or that all claims are generic is considered nonresponsive unless accompanied by an election.

Upon the allowance of a generic claim, applicants will be entitled to consideration of claims to additional species which are written in dependent form or otherwise include all the limitations of an allowed generic claim as provided by 37 CFR 1.141. If claims are added after the election, applicants must indicate which are readable upon the elected species. MPEP § 809.02(a).

Should applicants traverse on the ground that the species are not patentably distinct, applicants should submit evidence or identify such evidence now of record showing the species to be obvious variants or clearly admit on the record that this is the

Art Unit 1711

case. In either instance, if the examiner finds one of the inventions unpatentable over the prior art, the evidence or admission may be used in a rejection under 35 U.S.C. § 103(a) of the other invention.

Applicant is advised that the reply to this requirement to be complete must include an election of the invention to be examined even though the requirement be traversed (37 CFR 1.143).

Applicant is reminded that upon the cancellation of claims to a non-elected invention, the inventorship must be amended in compliance with 37 CFR 1.48(b) if one or more of the currently named inventors is no longer an inventor of at least one claim remaining in the application. Any amendment of inventorship must be accompanied by a petition under 37 CFR 1.48(b) and by the fee required under 37 CFR 1.17(i).

Due to the complexity of this election requirement, no telephone election was attempted.

Any inquiry concerning this communication should be directed to Jeffrey Mullis at telephone number (703) 308-2820.
